SUMMARY

Full-stack Software Engineer bridging product and infrastructure, designing web and mobile applications while architecting the cloud systems that keep them running at scale. Hands-on across React, Node.js, Swift, and Terraform on AWS, consistently owning features end to end from first commit to production deployment.

SKILLS

Programming: Python, JavaScript, TypeScript, Java, C/C++, C#, Swift, Golang, SQL, HTML, CSS

Frameworks & Libraries: React, React Native, Next.js, Angular, Node.js, Express.js, FastAPI, Spring Boot, .NET, Material UI, REST APIs, GraphQL, WebSockets

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Linux, Git

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Tools & Platforms: Cursor, Power BI, Tableau, Pandas, PySpark, Figma, Qt Creator, Salesforce

EXPERIENCE

- **Software Engineer - Paxel AI** Jun 2026 - Present
 - Engineered full-stack features for **Pulse AI** CRM using React, TypeScript, and Node.js; designed and maintained RESTful API routes consumed by the frontend, integrating intelligent AI features into core pharma sales rep dashboards.
 - Automated CI/CD workflows using GitHub Actions for release management, PR validations, and Terraform plan/apply pipelines across dev and production accounts, reducing manual intervention and ensuring deployment consistency.
 - Provisioned and maintained AWS services including Aurora, ECS, EKS, S3, VPC, and IAM, and supported AI/ML team to build **Fusion AI** with underlying infrastructure for model serving and chatbot integrations with per-service cost tracking.
- **Full Stack Engineer - Trace AQ** Sep 2025 - May 2026
 - Developed the iOS mobile application **FLOW AQ** using Swift and Xcode, providing real-time air quality monitoring, 4-day forecasts, and personalized alerts across all locations in North America — actively used by 700+ users daily.
 - Implemented and enhanced **Trace AQ | Aero** and **ADAPT Hospitality Screens**, full-stack air quality forecasting web applications using the AQA Engine and FastAPI to deliver interactive forecasts with dynamic visualizations.
 - Built and optimized the frontend and backend using Next.js, React, and Python, hosted on AWS Amplify and AWS ECS, integrating AWS Cognito, S3, Lambda, Dynamo DB, and API Gateway for secure and scalable deployment.
 - Collaborated on migrating backend infrastructure from CHPC to AWS, using Terraform to automate provisioning, optimize compute workloads, and streamline data processing pipelines for cloud infrastructure management.
- **Application Developer - University of Utah (School of Computing)** Jun 2024 - Aug 2025
 - Refactored a legacy course management system into a scalable web application using React, Material-UI, and Node.js; implemented JWT authentication, RESTful APIs, and optimized PostgreSQL database interactions to efficiently handle increasing data loads, supporting 180+ students per course each semester.
 - Served as a **Graduate Teaching Assistant** for **Software Practices 2**, designing C++ assignments, managing Agile projects using Qt Creator, Box2D, and Git, while leading labs focused on debugging, code reviews, and object-oriented design.
- **Software Engineer - Tata Consultancy Services (TCS)** Jul 2022 – Jul 2023
 - Developed order tracking and profile management features for TCS Experiential, an e-commerce portal in a 6-member team, using ReactJS, Node.js, and PostgreSQL and serving 15,000+ enterprise users across global regions.
 - Leveraged AWS EC2, S3, and Kinesis for scalable deployments, fast content delivery, and real-time data flow for the e-commerce portal; improved development efficiency with AWS CodeBuild for automated builds and testing.
 - Streamlined deployment workflows for the task tracking system by containerizing applications with Docker and automating unit/integration testing, contributing to faster release cycles.

EDUCATION

- **MS in Computer Science - University of Utah (3.83 / 4.0)** Aug 2023 – May 2025
- **BTech in Computer Science - MVGR College (JNTU affiliated) (8.84 / 10)** Jul 2018 – Jun 2022

PROJECTS

- **FLOW AQ Mobile App:** Developed an iOS app using Swift and Xcode, integrating AWS Cognito for user pool and authentication, DynamoDB for storing the forecast and nowcast data. Used Lambda, API Gateway, and SNS to implement serverless functions and real-time push notifications.
- **Relax – Streaming Application:** Built a responsive video browsing app using ReactJS, Material UI, and React Router with real-time search and playback. Fetched dynamic content via YouTube Data API (RapidAPI), displaying videos, channels, and related results. Focused on clean UI/UX and seamless playback functionality across devices.
